Portfolio: [Nirmal Karthikeyan](#) (Work in Progress)

UX/Product Designer with a Computer Science background, interested in making complex decisions feel simple and respectful of people's time, attention, and contexts. Believes in evidence-led, accessible design that balances business goals with clear, honest communication and practical, easy-to-use experiences across web and mobile.

Key skills: UX and product design; interaction and visual design; user research and usability testing; journey mapping and behavioural design; prototyping and UI design (Figma); design systems; data-informed design (analytics and session recordings); accessibility (WCAG) and inclusive design; front-end and app development (Flutter/Dart, JavaScript/TypeScript, React Native).

Related experience

Dec 2024 – Present

Product Designer | Tedaisy Insurance Group, UK |

Tedaisy is a UK pet insurance group behind the customer-facing brands Perfect Pet and Now Pet Insurance.

- Led end-to-end UX research and redesign of the insurance quote journey - conducting usability sessions, interviews, and data analysis (Lyssna, Hotjar, Amplitude, GA) to identify friction points and drive improvements that increased quote completion, including traffic from price comparison sites such as Compare the Market.
- Researched and designed new self-serve features for the policy management portal from the ground up, enabling customers to manage details, claims, and communications independently - reducing support demand and improving retention.
- Collaborate closely with the Head of Product, technical BAs, compliance, aggregator managers, the executive team, and developers to ensure design decisions are grounded in user needs and aligned with business and regulatory requirements.
- Audit journeys and interfaces against WCAG guidelines and brand standards, updating colours, typography, and components to ensure accessible, consistent experiences across web and mobile.
- Develop a shared design system (tokens and standard components) that improves speed, consistency, and quality across product teams.

Dec 2023 – Nov 2024

Customer Technology Engineer (Part-time) | Perro, UK |

Perro is a dog health and activity app focused on helping pet owners care for their dogs through digital tools, rewards, and engagement features.

- Used qualitative research (interviews, focus groups, user tests) to redesign onboarding and landing screens, reducing drop-off and improving early-stage engagement.
 - Mapped and improved end-to-end user journeys, removing friction and adding personalised in-app and email experiences via Customer.io to boost retention and satisfaction.
 - Analysed behavioural data from Segment and Mixpanel alongside business goals to prioritise the roadmap and make user experience changes that delivered measurable outcomes.
-

Related Volunteering

May 2026 - Present

Volunteer UX Designer, Reach Volunteering |

Reach Volunteering is a charity connecting volunteers with organisations that need their skills.

- Simplifying mobile flows and improving user experiences for both volunteers and charities.

Education

2023-2024

MSc in Human-Computer Interaction |

First class with distinction, NCL+ Award

Newcastle University, UK |

Relevant modules included: Interaction Design Methods, Systems and Societies, Research Methods in HCI, Technologies for HCI, Human-AI Interaction & Futures, Sustainable HCI.

- Covered interaction design methods, research methods, human-AI interaction, and sustainable HCI, with a focus on turning user needs into practical product solutions.
- Applied a range of evaluation techniques (expert reviews, lab studies, and user-centred evaluations) to identify usability issues, pain points, and opportunities for improvement.
- Planned and conducted qualitative and quantitative research (interviews, focus groups, and studies in the wild) to inform the design of digital services and interactive artefacts.
- Explored design ethics and socio-technical thinking, learning how to consider long-term social and environmental impact when designing technology.

2019-2023

BTech Computer Science and Engineering |

GPA: 8.73 (First class with distinction)

Amrita Vishwa Vidyapeetham, India |

- Developed proficiency in problem-solving strategies and algorithmic thinking, critical for addressing customer challenges and producing insights from large data sets.
- Developed a deep understanding of application design and development workflows through the design and development of an application that helped collect rich demographic data from impoverished rural regions for a GIS experiment that accounted for technical and user limitations. Errors in data dropped by over 50% in the aftermath.

Achievements

- Co-planned and presented a TechNExt workshop on demystifying AI for non-technical stakeholders, with a focus on clear communication and practical understanding.
- Mentored a team during the Sage+Newcastle Teens for AI hackathon hosted in March 2024. The team came runners-up in the event.
- Organized and hosted more than 20 workshops that introduced participants to various key topics in Computer Science not covered in curricula, drawing over 200 attendees regularly.
- Led the Google Developer Student Clubs chapter at Amrita, helping coordinate community events, talks, and learning opportunities in technology.

Interests

Technology: Enthusiastic about emerging tech; participate in hackathons; interested in extended and alternate usage, and retro computing.

Literature: Writing technology articles and short stories, reading for leisure and researching user behaviour. Researching and writing about my experience building a solution for screen de-addiction on [Medium](#).

Music: Trained singer with 10 years of experience; regularly sung on stage as part of school ensembles, participated in competitions and performed solo at local events.
